## **DETAILED ACTION**

### ***Response to Amendment***

1. The amendments filed April 3, 2008 and April 9, 2008 have been received and considered for examination. Claims 7-13, 29, and 33 are pending. The information disclosure statement filed April 28, 2008 has been received and considered.

### **EXAMINER'S AMENDMENT**

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

The application has been amended as follows:

In claim 7, line 11, replace "packing" with "packaging".

IN claim 7, line 11, replace "materials" with "material"

### ***Allowable Subject Matter***

3. Claims 7-13, 29, and 33 are allowed.

4. The following is an examiner's statement of reasons for allowance: The prior art, alone or in combination, fails to teach or fairly suggest the process of claim 7. Specifically, the prior art fails to teach the step of disposing water or an

Art Unit: 1797

aqueous solution onto the surface of the packing material prior to discharge from the discharge side of the high voltage electrode in the claimed environment.

The closest prior art is U.S. Patent No. 4,680,163 to Blidshun et al. whom discloses a method and apparatus for sterilizing the interior surface of a container (15). The apparatus comprises a high voltage discharge electrode (2a) that is inserted into the container, a ground electrode (13a) located on the outside of the container, a high voltage power source (14), and a source of an aqueous sterilizing agent (distilled water or hydrogen peroxide) which is directed into the interior of the container (see figure 2). The container (15) is sterilized by applying high voltage to the discharge electrode (2a) (which is located opposite from the ground electrode) in a gas atmosphere (an air atmosphere) under normal temperatures and pressures in order to create a corona discharge while at the same time, during the high voltage discharge, an atomized sterilizing agent is introduced to the interior of the container (15). However, Blidshun et al. only discloses simultaneous introduction of an aqueous solution during discharge and does not teach or suggest the step of disposing water or an aqueous solution onto the surface of the packing material prior to discharge from the high voltage electrode.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
